Stainless Steel Submersible Pumps

The Company

We build superior quality and energy efficient pumps and our aim is to provide pumping solutions to our end customers by giving them a proper guidance and solution. We are also committed to green environment movement by offering and continuously improving energy efficiency.

we also work as a Metal Die (tool) making and customs pump design. and provide all types of job work in sheet metal.

We know the value of water had become real and concrete, since then water installations are considered a primary good. Life Force Pumps is committed to study, to develop, to manufacture and to industrialize pumping systems.

In Life Force Pumps, we are continuously looking for the development of the products that fulfill the need of our customers. Main motive of our company is to satisfy the need of our customer by providing water solutions.

We are here to build relationship with minimum optimum expense from our users.

We have a 25 year Experience team in research and development on this industries.

Our Highly Experience research and development team are always move to provide water solution for the irrigation need.

Mission

- We aspire to provides high quality products that combine performance with value pricing, while establishing a successful relationship with our customers and our suppliers to gaining their trust.
- To constantly strive to meet our customer needs and expectations with comparative price, service, and selection to provide/enhance customer satisfaction. At the end, we will perform timely reviews of the marketplace to improve our products.
- To stay ahead by developing new products and services based on the customer needs and market demand.

Direct - on - Line starting is recommended up to 7.5 kW.

Soft starter or autotransformer is recommended above 7.5 kW.

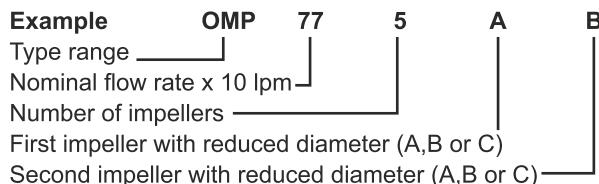

Applications

The pumps are suitable for the following applications:

- raw water supply
- irrigation systems
- groundwater lowering
- pressure boosting
- industrial applications

Type Key

Pumped Liquids

Clean, thin, non-aggressive liquids without solid particles or fibres. The max. sand content is 50 mg/lit.

Operating Conditions

Flow rate Q Maximum : 8 - 204 m³/h
Head H : max. 670m

Maximum Liquid Temperature

| Motor | Installation | | |
|---------|--------------------------|----------|------------|
| | Flow Velocity Past Motor | Vertical | Horizontal |
| 6" & 8" | 0.15 m/s | 40°C | 40°C |

Curve Conditions

Curve tolerance according to ISO 9906, Annex A

- The performance curves show pump performance at actual speed cf. standard motor range.
- The speed of the motors is approximately :

4" and 6" motors : n=2870 min-1
8" to 12" motors : n=2900 min-1

- The measurements were made with airless water at a temperature of 20°C. The curves apply to a kinematic viscosity of 1mm²/s. When pumping liquids with density higher than that of water, motors with correspondingly higher outputs must be used.

- The bold curves indicate the recommended performance range.
- The performance curves are inclusive of possible losses such as non-return valve loss.

Table of Head Losses

LFP 10, LFP 12, LFP 17, LFP 30, LFP 46, LFP 60, LFP 77, LFP 95, LFP 125, LFP 160 Curves

- Q/H : The curves are inclusive of valve and inlet losses at the actual speed.

- Operation without non-return valve (NRV) will increase the actual head at nominal performance by 0.5 - 1.0 m.

- NPSHR The curve is inclusive of suction case and shows required inlet pressure.

- Power Curve: It shows pump power input at the actual speed for each individual pump size.
- Efficiency Curve : Efficiency shows pump stage Efficiency.

SUBMERSIBLE PUMPS

1 Bearings with sand channels

All bearings are water-lubricated and have a squared shape enabling sand particles, if any, to leave the pump together with the pumped liquid.

2 Inlet strainer

The inlet strainer prevents particles over a certain size from entering the pump.

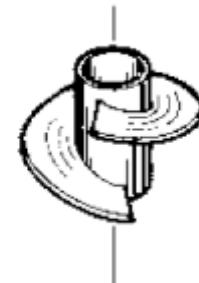

3 Priming screw

All Life Force 4" pumps are fitted with a priming screw. Consequently, dry running is prevented, because the priming screw will make sure that pump bearings are always lubricated.

Due to the semi-axial impellers of large pumps this priming is provided automatically.

However, it applies to all pump types that if the water table is lowered to a level below the pump inlet neither pump nor motor will be protected against dry running.

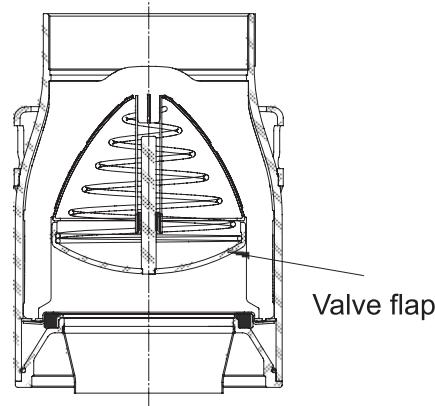

4 Non-return valve

All pumps are equipped with a reliable non-return valve in the valve casing preventing back flow in connection with pump stoppage.

Furthermore, the short closing time of the non-return valve means that the risk of destructive water hammer is reduced to a minimum.

The valve casing is designed for optimum hydraulic properties to minimize the pressure loss across the valve and thus to contribute to the high efficiency of the pump.

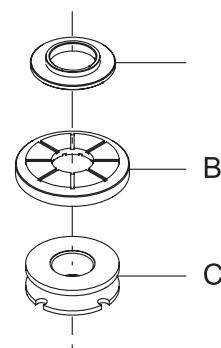

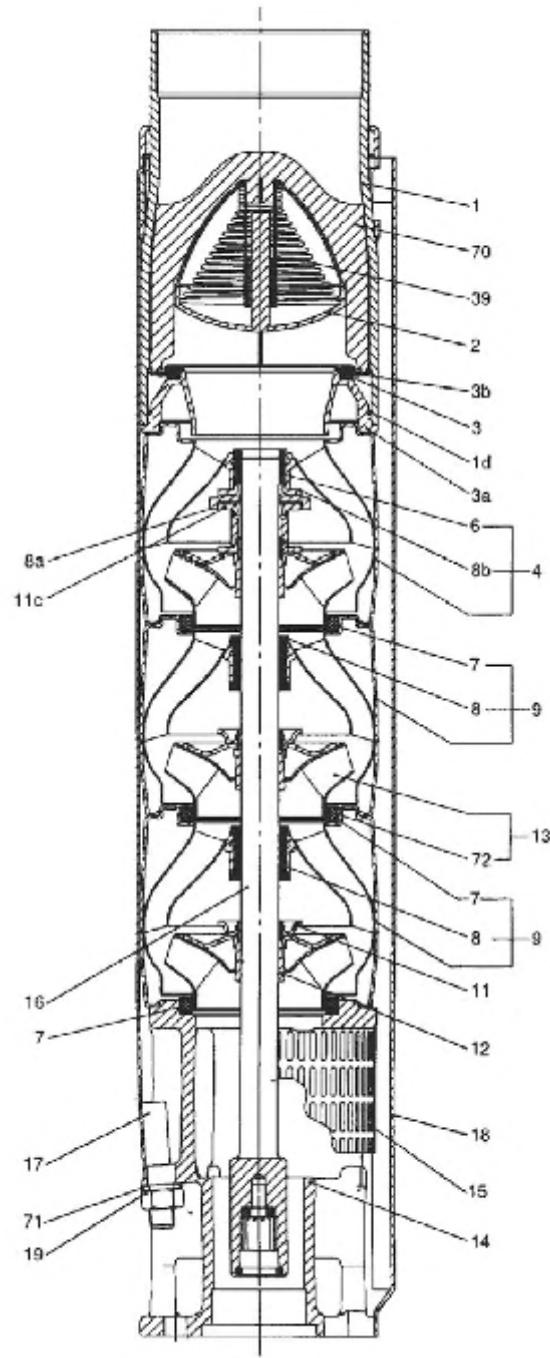

5 Stop ring

The stop ring prevents damage to the pump during transport and in case of up-thrust in connection with start-up.

The stop ring, which is designed as a thrust bearing, limits axial movements of the pump shaft.

The stationary part of the stop ring (A) is secured in the upper chamber. The rotating part (B) is fitted above the split cone (C).

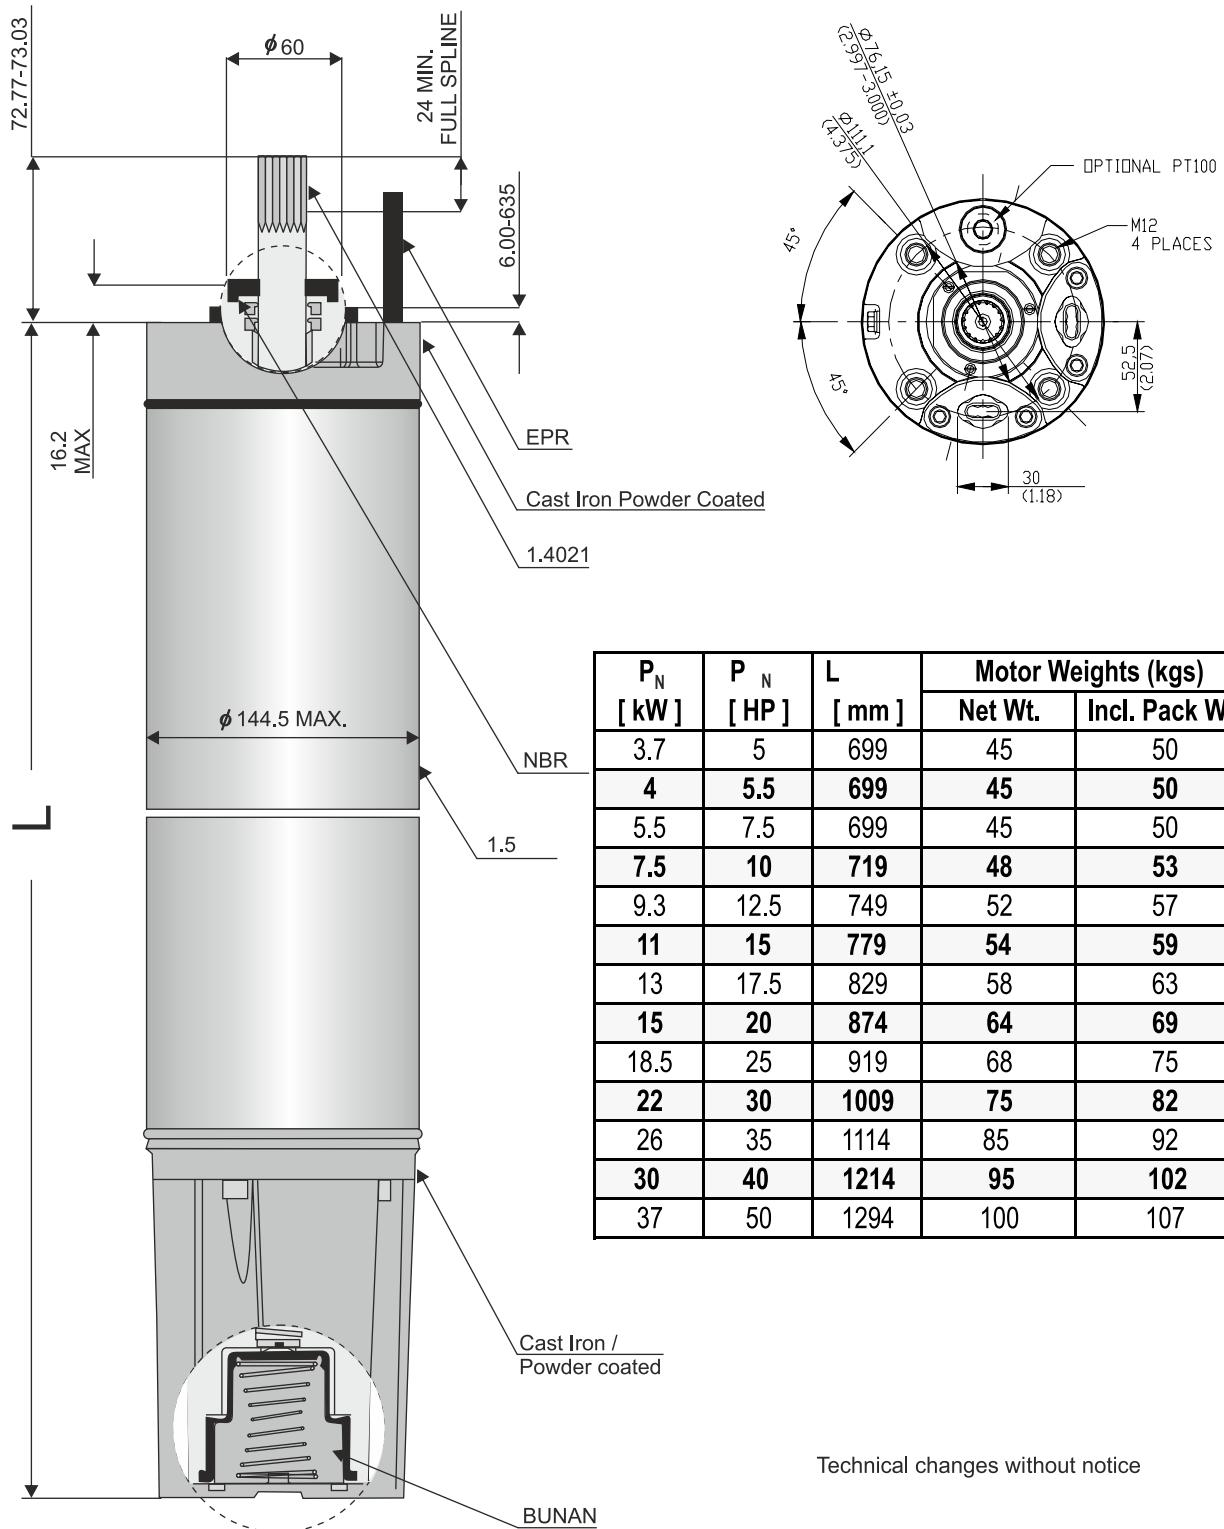

SUBMERSIBLE PUMP MODEL LFP77

6" Rewindable HSF 150 : 4 – 37 kW / 5.5 - 50 HP

Thrust Rating : 15500 - 27500

HSF 6" Outline

6" Rewindable LFP 150 : 4-37 kW / 5.5 -50 HP

Thrust Rating : 15500 - 27500

6" Rewindable Motors Product Information

Application

6" Rewindable motors are built for dependable operation in 6" diameter or larger water wells. Water lubricated thrust and radial bearings enable a maintenance free operation. The motors are ready to operate, providing frost protection down to - 15°C. Fill and check valve, as well as a preloaded special diaphragm, ensure pressure compensation inside the motor. (Inside pressure 0,5 - 0,7 bar)

Other Product advantages :

- Cable material according to drinking water regulations.
- Sand slinger and shaft seal for high performance in sand.
- High efficiency electrical design for low operation cost.
- All motors prefilled and 100% tested
- Design for retrofittable PT100 sensor

Material

| Part | Material AISI |
|---|------------------------------|
| | 304 (Standard) |
| Shell | (SS AISI 304) |
| Endbell Diaphragm cover | Cast Iron / powder coated |
| Housing thrust bearing | Cast Iron Powder Coted |
| Seals | BUNA N |
| Seal Cover | (SS AISI 304) |
| Shaft Cover | SiC |
| Shaft end 4kW-22kW / 5.5 HP - 30 HP | (SS AISI 410) |
| Shaft end 26kW-37kW / 35 HP - 50 HP | (SS AISI 410) |
| Diaphragm | EPR |

Technical Specification

Standard Motors

- 6" NEMA - flange with studs (M 12)
- Protection : IP 68
- Starts per hour: max. 20
- Installation position: vertical / horizontal
- Motors Lead in 4m length
- Voltage tolerance: +6% / -10%
- (Standard: 415 + 6% = 440V. 380-10% = 342V)
- Motors protection: Select Taping winding insulation for max. ambient of 30 with a min.

Optional

- PT 100 temperature sensor (sold separately)
- Drop cable in different length up to 50m

Table of Head Losses in Ordinary Pipes

www.lifeorcepumps.com

LIFE FORCE
Pumps | Motors

Upper figures indicate the velocity of water in m/sec.

Lower figures indicate head in metres per 100 metres of straight pipes

| Quantity of Water m³/h | Ultr/min. Litres/sec. | PELM/PEH PN 10 | | | | | | | | | | | | | |

Table of Head Losses in Ordinary Pipes

www.lifeorcepumps.com

LIFE FORCE
Pumps | Motors

Upper figures indicate the velocity of water in m/sec.

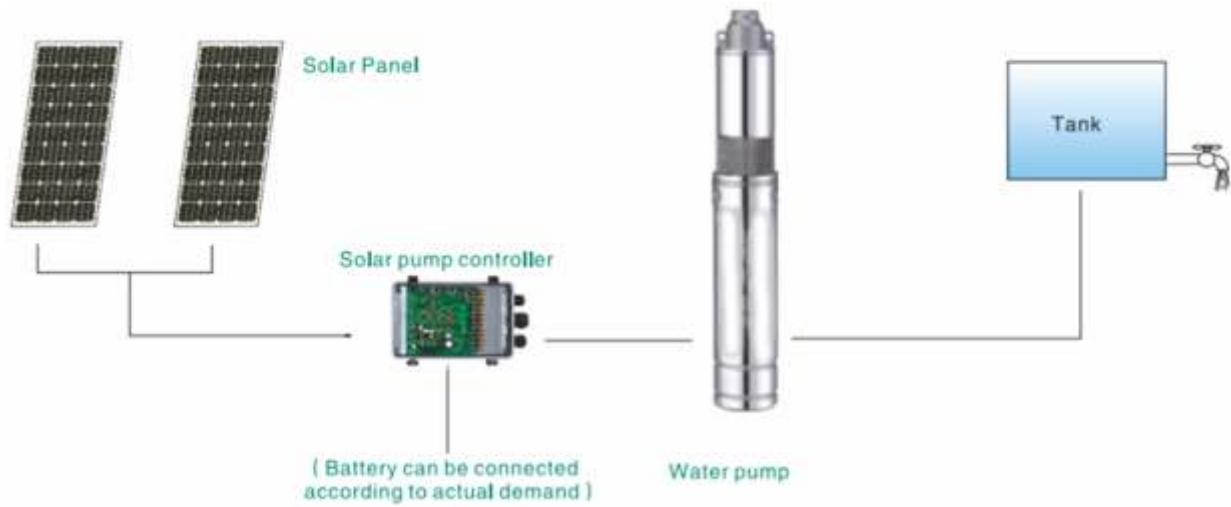

Lower figures indicate head in metres per 100 metres of straight pipes

| Quantity of Water | | | Head Losses In Ordinary Water Pipes | | | | | | | | | | | | | | |
|------------------------------------|-------------|-------------|---|----------------|-------------------------|-------------------------|-------------------------|----------------|----------------|----------------|----------------|----------------|----------------|-------|--|--|--|

The table is calculated in accordance with H. Lang's new formula $\alpha = 0.02$ and for a water temperature of 10°C.

The head loss in bends, slide valves, T-pieces and non-return valves is equivalent to the sum of straight or straight pipes stated in the last two lines of the table. To find the head loss in T-pieces multiply the loss in T-pieces by two.
